LASER CUTTING

TRUST US

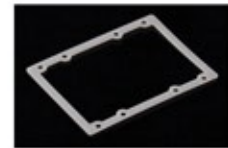

OUR LASER CUTTING SERVICE OFFERED

Laser cutting produces part shapes by cutting sheet material using an intense laser beam. This cutting method uses a beam of high-density light energy focused through a tiny hole in a nozzle. When this beam strikes the surface of the work piece, the material of the work piece is vaporized.

LASER METAL CUTTING

- Stainless
- Alloy Steel
- Soft Steel
- Thin Sheet Metal

WOOD LASER CUTTING

- Soft & Hard Woods
- Alder Wood
- Beechwood
- Fine Wood
- Cherry Wood Cork
- MDF
- Natural Wood

LASER CUTTING ACRYLICS & PLASTIC

- POM
- PE
- PTFE
- Nylon
- Rubber
- Teflon
- ABS
- PVC

Cutting Size

51" Wide x .010"-1" Thick x 36" Length

ENGINEERING - MACHINING - FABRICATION - EDM - ASSEMBLY
